EMMANUEL CHIZINOWA LUMATI

Address: No. 54 Ogbunabali Road, Port Harcourt Rivers State, Nigeria, 500101 **| Phone:** +234 8027723121
Email: emmanuellumati22@gmail.com **| LinkedIn:** www.linkedin.com/in/emmanuel-lumati-759900286**|**
GitHub: github.com/Emmylums

Profile:

Product-focused Software Engineer with a proven track record of designing scalable distributed systems and crafting high-quality APIs that power modern applications. Adept at bridging the gap between complex backend architectures and clean, intuitive user experiences. Deeply passionate about AI/ML-driven solutions and enterprise-grade platforms, with specialized experience in building secure, high-performance payment systems. Excited to bring a product-first mindset to engineering teams building magical, human-centric solutions.

Core Skills:

Java • Spring Boot • React • React Native • Node.js • REST APIs • MongoDB • Firebase • Git • Tailwind • Bootstrap

Experience:

Software Developer – Ada's Kitchen

Location: Brixton Station Road, London, SW9 8PA
Employer: Franklyn Richard Atako
June 2025 – Present

- End-to-End Digital Ecosystem: Single-handedly architected, developed, and deployed a complete digital presence for a culinary brand—including a modern, interactive website (pre-launch), a cross-platform mobile application (in development), and a scalable backend infrastructure—delivering a cohesive experience across all touchpoints.
- Modern Frontend Development: Built the website using React with Tailwind CSS for rapid, responsive styling, while leveraging Framer Motion to create smooth, engaging animations that elevate the user experience and reflect the brand's identity.
- Modern Mobile Application Development: Currently using React Native paired with NativeWind (Tailwind for mobile app development) for easy and smooth user experience whilst not deviating from the user's original website experience.
- Scalable Backend & API: Developed a mini backend using Node.js, designing clean REST APIs to power both the website and mobile app, ensuring consistent data flow, real-time synchronization, and a seamless experience across platforms.
- Payment Integration: Integrated Stripe for secure payment processing, enabling seamless transactions and laying the foundation for future order management and e-commerce functionality.
- Real-Time Database: Leveraged Firebase for real-time data synchronization, authentication, and cloud functions, creating a responsive architecture that instantly reflects user actions across the application.
- Independent Development Lifecycle: Owned the entire development lifecycle—from requirements gathering and system architecture to implementation, testing, and deployment—demonstrating self-sufficiency, technical breadth, and strong product intuition.
- CI/CD & Deployment: Managed version control using GitHub and automated deployments through Vercel, ensuring a streamlined delivery pipeline and rapid iteration cycles.

Backend Engineer – LC Signatures Cutz
Location: 1215 Bourges Blvd, Peterborough PE1 2AU
2024

- Backend Architecture & Development: Served as the sole Backend Engineer, designing and developing a robust, production-ready backend using Spring Boot (Java) to power a fully functional barbershop website—handling service management, appointment scheduling, customer data, and business logic.
- Infrastructure & Deployment: Deployed and managed the backend application on a VPS hosted via Hostinger, taking full ownership of server configuration, security hardening, and application deployment to ensure reliability and uptime.
- Database Design & Security: Designed and implemented a MySQL database on the same VPS, leveraging encrypted storage to protect sensitive customer and business data—demonstrating a strong understanding of data security, privacy, and production-grade database management.
- Frontend Integration & Collaboration: Orchestrated seamless integration between the backend APIs and the frontend application using Axios, collaborating with the frontend developer to ensure clean data flow, consistent API contracts, and a smooth user experience across the website.
- API Design & Documentation: Built clean, well-structured REST APIs using Spring Boot, documenting endpoints and request/response schemas to enable efficient frontend integration and reduce friction during development.
- Independent Technical Ownership: Owned the entire backend lifecycle—from system architecture and database schema design to deployment, monitoring, and maintenance—demonstrating self-sufficiency, infrastructure acumen, and the ability to deliver production-grade systems independently.
- Professional Project Conclusion: Successfully delivered a fully operational backend that met all business requirements. The project concluded amicably when the owner opted to discontinue the overall service due to budget constraints—demonstrating my ability to build reliable, secure systems while maintaining professionalism throughout the project lifecycle.

Frontend Developer – Grow With Alerah
Location: Remote
Employer: Ferguson Odungweru
2024

- Sole Developer & Technical Owner: Single-handedly built and deployed a fully functional marketing website for an educational brand, serving as the sole engineer responsible for all technical decisions, implementation, and deployment.
- Modern Frontend Development: Developed the website using React, creating a clean, responsive interface that showcases course offerings, provides detailed course descriptions, and enables prospective students to learn about the curriculum before reaching out.
- API Integration: Integrated external APIs to enhance functionality, demonstrating the ability to work with third-party services and handle asynchronous data flows within a React application.
- Firebase Data Management: Leveraged Firebase to store and manage website content dynamically, allowing the owner to update course information, descriptions, and site content without requiring code changes—providing flexibility and ease of maintenance.
- Image Hosting with ImgBB: Utilized ImgBB for efficient image storage and delivery, optimizing media assets to ensure fast load times and a smooth visual experience across the site.

- Collaborative Design Execution: Worked closely with the brand owner and a small team who contributed design direction and content strategy, while I translated those concepts into fully realized, production-ready code—bridging the gap between creative vision and technical execution.
- Contact Functionality: Implemented a contact mechanism that enables potential students to reach out directly to the owner for inquiries, course registrations, and additional information—facilitating business growth without requiring complex user authentication systems.
- Independent Deployment: Managed version control with GitHub and handled deployment independently, ensuring the site remained live, performant, and accessible.

Projects:

AI-Powered Trading Signal Platform

2024-Present

- AI-Driven Signal Detection: Developed an intelligent trading system that fetches real-time market data from external sources and applies machine learning models to detect high-probability trading signals across multiple strategies—automating technical analysis that traditionally requires constant manual monitoring.
- Multi-Strategy Architecture: Built a multi-strategy trading system using Python for data processing and signal generation, paired with Node.js for the backend API layer—enabling modular strategy execution and scalable system design.
- Real-Time Data Integration: Implemented live data fetching pipelines to ingest market prices, volume, and volatility indicators, ensuring the AI models operate on the most current information available for accurate signal generation.
- Interactive Visualizations: Designed and integrated real-time charts with clear signal overlays, allowing users to visually identify entry points, exit zones, and pattern recognitions generated by the AI engine.
- Risk Management Features: Engineered Take-Profit (TP) and Stop-Loss (SL) visualization tools, enabling users to understand potential risk-reward scenarios at a glance and make informed decisions based on AI-generated insights.
- Analytics Dashboard: Built comprehensive analytics views to track strategy performance, signal accuracy rates, and historical trade outcomes—providing transparency into the AI's decision-making patterns.

Education:

Professional Diploma in Information Technology (Software Engineering) – National Institute of Information Technology (NIIT)

Location: Port Harcourt Centre, Khana Street, Off Fruit Garden, Port Harcourt, Rivers State, Nigeria.

October 2022 – November 2025
